New Earth Anchor System Secures Parks & Recreation Structures

An easily installed system from Foresight Products LLC, securely anchors a wide range of parks and recreation amenities including benches, tables, playground equipment, toilets and other structures.

The AMU system consists of a Manta Ray® Earth Anchor attached to a threaded rod. The anchor is first driven into the ground with a heavy hammer and re-usable drive steel to the proper depth.

A locking socket and drill is used to pull the rod, toggling the anchor into a perpendicular position. A nut and washer complete the fastening.

In addition to the above, the AMU system has proven successful in securing planters, trash containers, shade structures, barbecue equipment, bleachers, pre-fab structures, air structures and many other items into any type of soil. No excavation or concrete is required.

Manta Ray earth anchors are manufactured by Foresight Products, LLC in the U.S.
