

LL-2 ANCHOR LOCKING KIT **(8000 LB. MAXIMUM CAPACITY)**

The LL-2 Anchor Locking kit is designed to Load Lock and proof test Small Manta Ray and Duckbill anchors. It is manually operated and has a maximum capacity of 8000 pounds (36kN). It can accommodate anchors installed vertically or at angle to the ground. The anchor capacity is easily read on the included gage. The design of the LL-2 is such that the load on the anchor in pounds is equal to the pressure in psi (pounds per square inch) as read on the gage. It includes an accessory kit to allow attachment to anchors equipped with SAR-58 style anchor rods, AT-16 (1/2" UNC) or AT-12 (3/8" UNC) anchor rods, or cabled anchors. The kit also includes a Rod Clamp and cable sling accessory to allow gripping of SAR-58 Style anchors below the ends of the threads. Also included is an operation Manual and a Load Verification Sheet.
